Table of contents

Introduction    Judit Kormos and Edit Kontra

Chapter 1 L1 and L2 literacy, L1 and L2 aptitude, and L2 affective variables as discriminators among high- and low-Achieving, LD, and ADHD L2 learners
Richard L. Sparks, Leonore Ganschow and Jon Patton

Chapter 2 Writing abilities in first and second language learners with and without reading disabilities
Katherine Ndlovu and Esther Geva

Chapter 3 Second language assessment in dyslexia: Principles and practice
Turid Helland

Chapter 4 Input, processing and output anxiety in students with symptoms of developmental dyslexia
Ewa Piechurska-Kuciel

Chapter 5 Vocabulary learning in Dyslexia – The case of a Hungarian learner
Ágnes Sarkadi

Chapter 6 An experiment with direct multisensory instruction in teaching word reading and spelling to Polish dyslexic learners of English
Joanna Nijakowska

Chapter 7 Deaf EFL learners outside the school system
Ágnes Bajkó and Edit Kontra

Chapter 8 Teachers’ and trainers’ perceptions of inclusion within TEFL certificate courses in Britain
Anne Margaret Smith

Chapter 9 Hungarian teachers’ perceptions of dyslexic language learners
Judit Kormos and Edit Kontra
Vocabulary Learning in Dyslexia – The Case of a Hungarian Learner

ÁGNES SARKADI

The aim of this qualitative research was to gain information about the vocabulary learning processes of a Hungarian dyslexic learner of English and to examine the student’s reactions to the use of compensatory techniques recommended for teaching foreign languages to dyslexics. According to the findings, the learner in question experienced severe difficulties in vocabulary acquisition. She found English spelling and pronunciation extremely challenging because of the deep orthography of the language. Furthermore, the memorization of misread word forms and the confusion of similar looking and sounding words also caused problems. As for the special techniques recommended for teaching dyslexics, the elimination of homogenous inhibition, the application of multisensory techniques and mnemonic devices and the explicit teaching of grapheme-phoneme correspondences helped the student to overcome some of her difficulties in vocabulary acquisition.
Hungarian teachers’ perceptions of dyslexic language learners

JUDIT KORMOS AND EDIT KONTRA

This paper reports on an interview study conducted at five different schools in Hungary with teachers involved in a special compensatory program for dyslexic language learners. The teachers worked in close co-operation with speech therapists, psychologists and experts in special education in preparing and implementing the course. The in-depth semi-structured interviews aimed to discover the language teachers’ and special education experts’ perception of the nature of the problems dyslexia causes in foreign language learning at the classroom level, and of the effectiveness of the preparatory training the teachers received in this field. With the help of a 'thick description' of the data, the authors present an insider's perspective of working with dyslexic language learners and capture the essence of their findings in a model, which also highlights the need for a change in the present attitudes of teachers and schools.
This article describes the case of a small group of Deaf adults taking an English course specifically designed for them at a private language school in Hungary. The authors examine the learners' beliefs about language learning, their motivation and their learning strategies and also provide an insight into the methods and materials used by their teacher. Data were gathered via a series of observations, student and teacher interviews, a questionnaire and the analysis of teaching materials. The study focuses on the advantages of using sign language in teaching foreign languages to the Deaf. The research findings are of particular significance in an environment where sign language is not acknowledged as the first language of the Deaf, and where public education and teacher training institutions overwhelmingly promote the oralist method of teaching and the exclusive use of the language of the hearing majority.
